Group Number: 15

Ashkan worked on setting up the server and the Observable objects, which were the clients. He also worked on the login UI. Kevin worked on the sound and logout UI. He also worked on the alert boxes for invalid inputs. We worked together on adding friends, starting one-to-one chat rooms, and multiple user chat rooms. This included setting up sending information back and forth from the clients and the server along with the UI for the actual chat rooms and the friends list.
